

Your PI treatment discussion guide

Whether you just started treatment for Primary Immunodeficiency (PI) or you've been on it for years, you can always talk with your doctor about treatment administration options that fit your lifestyle and treatment goals.

Take this list of questions to your doctor to help discuss your options.

Infusion Method

What are the differences between subcutaneous infusions vs intravenous?

What makes someone a good candidate for subcutaneous infusions?

Infusion Frequency

Is CUVITRU an appropriate treatment option to help reduce how frequently I am infusing?

What do you see from your patients who cut back on their frequency of infusions?

Time Spent Infusing

How do faster infusion rates impact my infusion experience?

 **Safety**

What are the risks and side effects with CUVITRU?

 **Number of Needlesticks per Infusion**

What options are available to someone looking for a treatment option with fewer needlesticks?

 **Administration and Site of Care**

Have you had a lot of patients do self-infusions?

What can I expect from an at-home infusion?

Regardless of treatment, Takeda supports the PI community with various resources, including those found at [MylgSource.com](https://www.mylgsource.com).
